Introduction

KeyExtender can change any key on the keyboard into other keys or disable your keys you dislike. But KeyExtender is not just a tool that allow you to customize your keyboard layout. With it, you can change your common 102 keyboard into a multifunctional one without costing much money. Want the N key to press Ctrl+V? Want the pause key to type frequently used text such as email address? Want F9 key to turned up the volume ? Want to lock the keyboard? KeyExtender can do these easily, it could help you make good use of each key on the keyboard.

Features

- Simple interface
- Change one key for another or disable it.
- Change one key for a sequence of keys.
- Change one key to type frequently used text.
- Supports Registry Map change.
- Use additional keys on your multimedia/internet keyboard with KeyExtender.
- Eject cdrom drives and shutdown your computer
- Display of volume when you play games or watch films.
- Clean all the content in the current input box.
- Lock/Unlock your keyboard.

Getting Started

System Requirements

Supports Microsoft Windows 2000 or Microsoft Windows XP.

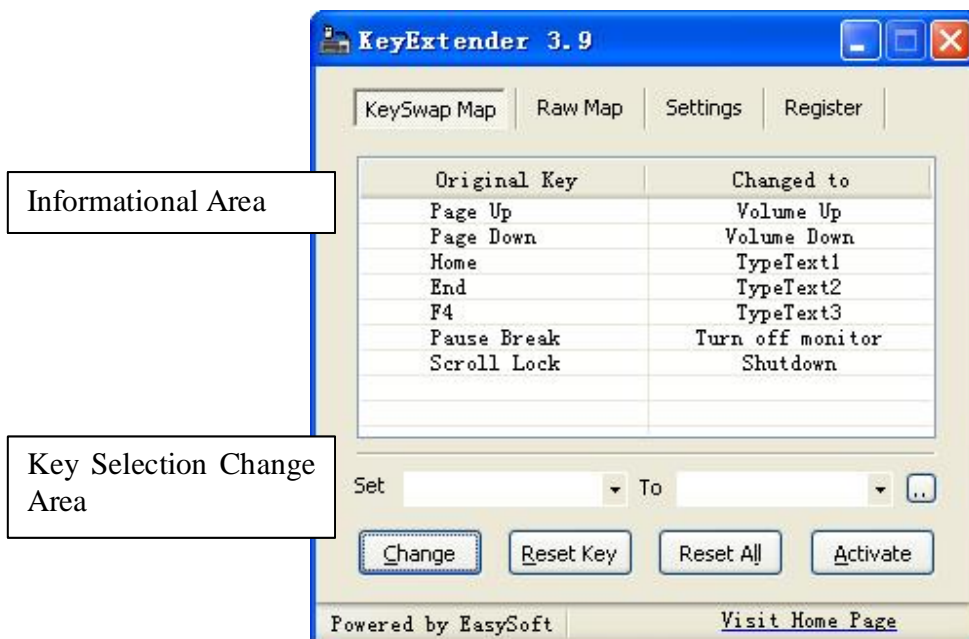

Installation Notes

Installation is made simple with Nullsoft's Software Installation System (NSIS).

Just run Setup.exe and choose a directory to install KeyExtender. Once installed, you can copy the KeyExtender.exe KeyDat.ksp file onto a floppy and run it right from there. Really, the whole installation bit for the sake of this manual and to make it easy to clean up your computer if you want to uninstall. To uninstall, simply run the uninstall.exe file that is located in the same directory as KeyExtender.exe – or just use the shortcut from your Start Menu.

Using KeyExtender

The main form is laid out into three main areas. These areas are the Informational Area, and Key Selection Change Area. The Informational Area shows the key which has been changed. The Key Selection Change Area can select the original key and the key changed to .

For example: if I want the F1 key to press Enter, first you should press F1 in the left input box, second press Enter in the right box, third click Change button, finally, click Activate button.

Registry Map

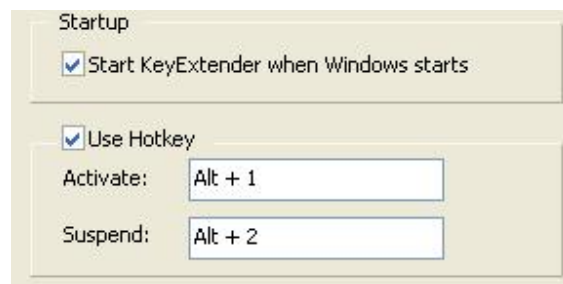

Registry Map shows the key convert which makes use of Microsoft's Scancode Map registry key . It does not even need to be actively loaded in memory. When changing key by Registry Map, you should click Activate button to log out to take effect. Registry Map don't support SimulateKeys or TypeText and such as.

Clean Text

The CleanText could clean all text in the current input box.

Settings

In the settings tab you can configure how KeyExtender starts up, whether use HotKey to Activate or Suspend Change.

General Information

What 's different between KeySwap Map and Registry Map?

The KeyExtender Map show the convert by KeyExtender ,it will be take effect after running KeyExtender, And the Registry Map show convert which makes use of Microsoft's Scancode Map registry key . It does not even need to be actively loaded in memory.

How to lock/unlock my keyboard?

To Lock/Unlock keyboard, right click the tray icon and click Lock/Unlock Keyboard.

Registration Information

KeyExtender is a shareware program which means that you must buy the program if you continue to use it. The demo version works for 40 use trial within which you are expected to purchase the program.

A registration form with a light beige background. It contains two text input fields: 'User Name:' and 'Serial Number:'. Below these fields are two buttons: 'Order' and 'Register'.

You can purchase KeyExtender online at <http://www.easysoft.com.cn/en/register.html>. The whole payment process is secure and a variety of payment methods including Visa, MasterCard, Paypal, Cash, Money order and others are accepted.

A single user license typically costs 19.95 USD. But do check the order page for latest offers and other licenses.
